

# PROJECT PROPOSAL

Accurately predicting the behaviour of systems is a key element in developing novel applications. Multiphysics modelling is an interesting domain bridging theory and experiment. **For students, who are interested in deepening their knowledge and enjoy modelling, this unique opportunity will prepare them for a career in research.** The project will focus on electromagnetic and electrochemical applications. Students with background in electrical engineering, electrochemistry, physics, and applied mathematics are welcome to apply. Please contact Prof. Krish Sankaran via email: [sankaran@iitb.ac.in](mailto:sankaran@iitb.ac.in)
