# Outline

- 1 The Problem
- 2 Train Timetable Book
- 3 Crew Duty Sets
- 4 Problem Statement
  - Formulation and Objectives
  - Constraints
- 5 Work and Results
- 6 Technical Details
- 7 Conclusions
- 8 Departments and People

# Introduction - Mumbai Western Railways

- Western Railways uses **89 rakes** to run **1355 services**
- Crew Allotment - Each service requires a guard and motorman

Figure 1: Suburban Railways Map

Figure 2: Matching Crew to Services

# The Problem

- **Shortage** 132 guards, 90 motormen → **Overtime is expense, vulnerable**
- Currently done manually, **2-3 months** long process
- Difficult to manually determine an optimal set allocation

# The Problem

- **Shortage** 132 guards, 90 motormen → **Overtime is expense, vulnerable**
- Currently done manually, **2-3 months** long process
- Difficult to manually determine an optimal set allocation
- Need for an **automatic** and **optimized** crew planning tool to:
  - Reduce operating costs
  - Improve system efficiency
  - Provide better working conditions, safety

Work to be done by the tool

Train Timetable Book → Crew Schedule Book

# Train Timetable Book

Figure 3: Each column in the timetable book represents a service (total 1355)

# Crew Schedule Book

Services are grouped into duty **sets** which define a **motorman's daily work**

- ON duty time and station, OFF duty time and station
- All services to be worked by motorman during duty time
- Rest hours (rest given after completing that day's work)

<b>SET NO. 1</b>				<b>ADH-4</b>
ON DUTY :	16:35	CCG	KMS :	166.09

Figure 4: Each box in the crew schedule book is a set, 4 sets shown

# Types of Sets

- Working sets:
  - **Day working sets**
  - **Halting working sets** - Always in **pair**, **small rest at night**  
Required for morning services
  - **Night sets** - **On-duty time after 22:00**  
Required for unassigned night services, shunting and morning services
- Waiting duty and shunting duty sets:
  - Emergency work
  - Taking rake to/from stabling depots

# Set **Generation** Constraints

- Total working hours in a set  $\leq 8$  hours
- No unnecessary breaks between services, Break  $\leq 30$  minutes
- About 40 minutes break for meals
- Protection and work overlap for services that:
  - Require rake to navigate in opposite
  - Run during peak timings  $\rightarrow$  7:00 to 11:00 and 17:00 to 22:00
- **Change of crew** as same crew cannot continue running the same rake
- Halting sets:
  - Rest between pair  $\geq \max(5, \frac{2}{3} * \text{Working hours of first part})$  hours
  - Total working hours for pair  $\leq 14$  hours
  - Second part should be lighter

# Set **Linking** Constraints

- Total working hours for last 14 days  $\leq$  104 hours
  - Rest between sets  $\geq$  12 hours (except between halting pairs)
  - Rest after night duty  $\geq$  30 hours
  - Allocate sets for waiting duties and shunting duties:
    - Number at such sets predefined
    - Required only at Churchgate, Bhayandar, Bandra, Borivali stations
    - In time slots of 7:00 to 15:00, 15:00 to 23:00 and 23:00 to 7:00
- Night is when majority movements **to/from stabling depots** happen

# Problem Formulation

The overall problem has been decomposed into the following 2 stages:

① **Set Generation Stage**

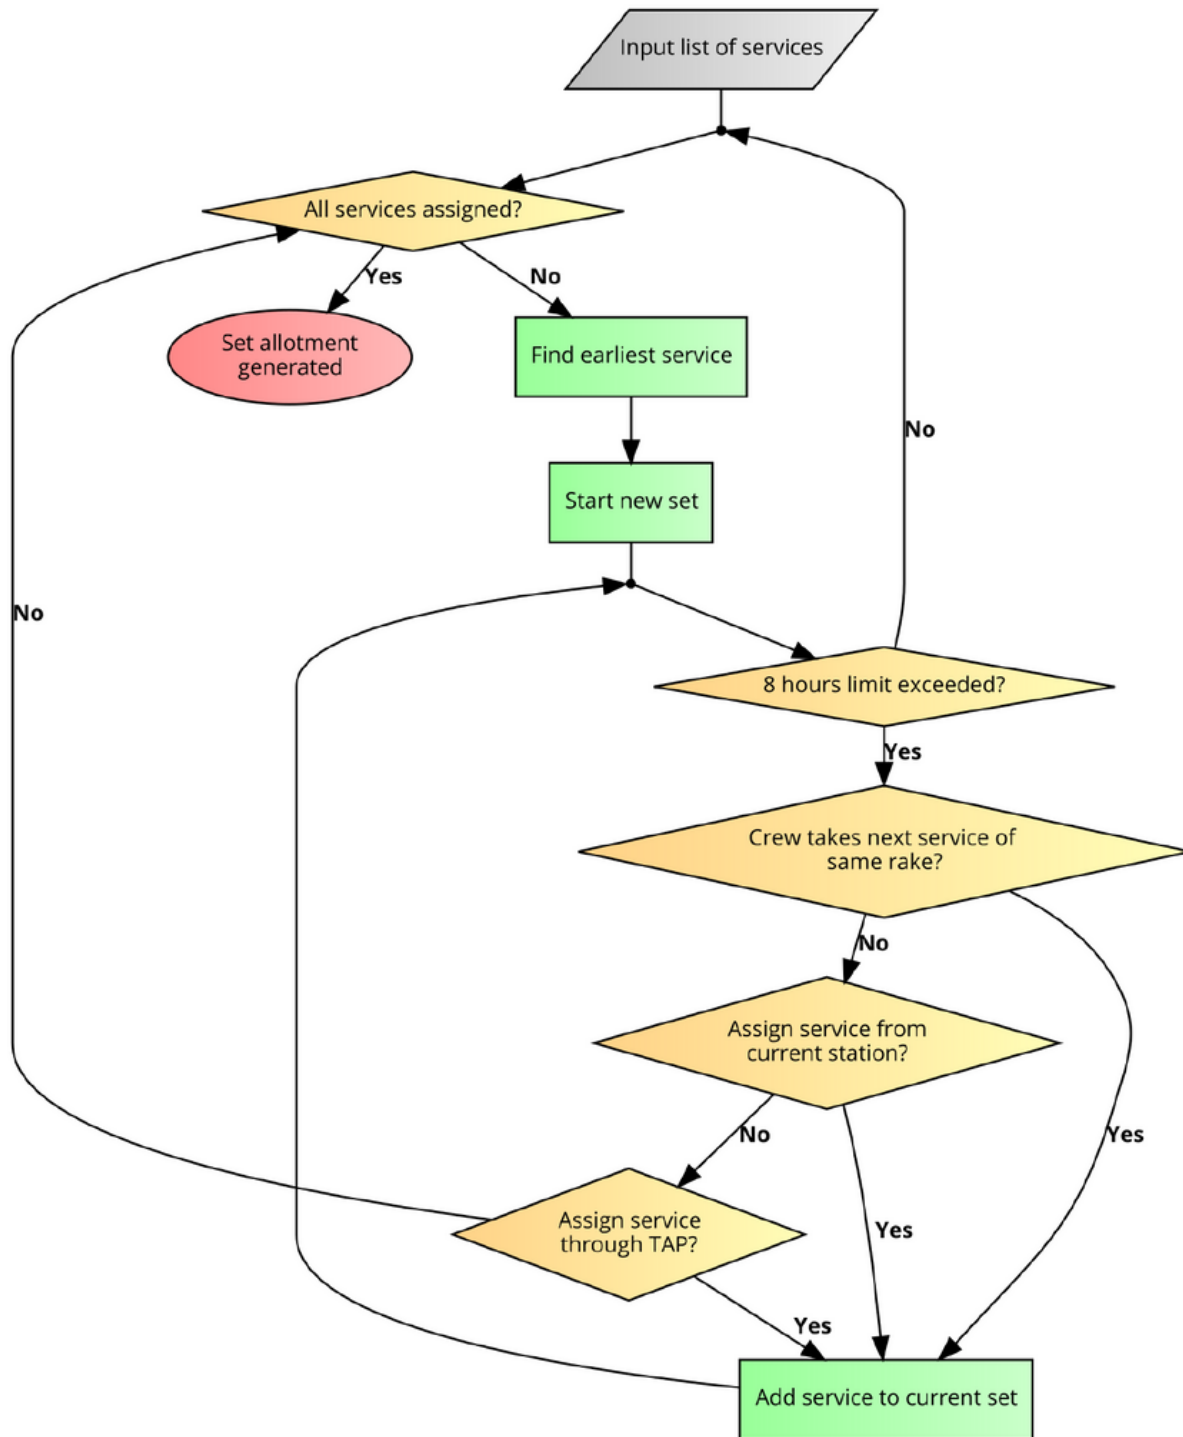

To **group services** into work days → Daily work

② **Set Linking Stage**

To **arrange work days** into a sequence → Monthly work

Objectives (decreasing order of importance):

- Tight **packing of services** → Maximizes average working hours, kms
- Tight **linking of sets** → No unnecessary rest
- Sets should **start/end close to headquarters** - Churchgate, Borivali
- **Minimize** TAP (Travel as a passenger) between services
- **2:3** ratio of number of sets for Churchgate and Borivali headquarter

## Crew Duty Generation Tool

Easy-to-use tool for generation of efficient crew duty sets

<b>STATISTIC</b>	<b>ALGORITHM</b>	<b>MANUAL</b>
Number of Halting Sets	129	192
Number of Day Working Sets	209	161
Number of Night Working Sets	30	29
Total Sets	<b>368</b>	382
Average Kms	<b>135 kms</b>	125 kms
Average Working Hours	<b>6:29</b>	6:16 (CCG DEPOT) 6:23 (BVI DEPOT)

Comparison of duty sets generated by the tool vs manual preparation

# Technical Details

- Python 3 programming language used
- Compatible with Linux and Windows
- 30+ constraints programmed in the algorithm
- Efficient, flexible and quick

HOER rules, policies and on-field expertise modelled into the tool to automatically generate work duties that are operationally feasible and ensure safety of staff

# Conclusions

- Services and their station/timing details as **input**
- Crew work duties in desired format as **output**
- Preparation of work duties within minutes
- **Customizable** and flexible tool that can easily adapt to changes in:
  - Services
  - Lobby locations
  - Any other parameters within the policy/constraints
- **Analysis** before making changes in policy, operations, infrastructure  
For example, introducing Virar station as a third headquarter in WR
- Tool under preparation since 1 year, currently under final review
