

voltmeter_fb.ece

Attributes

```
mainnodes: p m  
main_var: v_fb
```

Description

`voltmeter_fb.ece` is a voltmeter connected between nodes `p` and `m`. The voltage across the voltmeter is made available as a general variable `v_fb` and can be used, for example, in control applications.

In AC situations, `v_fb` is an AC general variable (a phasor).
