

`voltmeter_fb.ece`

Attributes

```
mainnodes: p m
rparams: k_scale=1
main_var: v_fb
```

Description

`voltmeter_fb.ece` is a voltmeter connected between nodes `p` and `m`. The voltage across the voltmeter is made available as a general variable `v_fb` and can be used, for example, in control applications.

In AC situations, `v_fb` is an AC general variable (a phasor).

The real parameter `k_scale` is used to scale `v_fb` by a constant.
